Can I integrate PIXIE with my CBUS®, Dynalite®, Control4® System?

Integration · https://pixiepartners.com.au/support-docs/can-i-integrate-pixie-with-my-cbus-dynalite-control4-system/

Yes, using the PIXIE Blind and Signal controller as a dry contact interface device it is possible to control any part of your CBUS® system using the PIXIE smart home solution too.

Your CBUS® system must have the ability to receive dry contact inputs and translate these inputs into CBUS® actions.

PIXIE can also receive dry contact message from your legacy smart home system using the PIXIE translator device.

In this way bi-directional control to and from 3rd party smart home systems is possible, simply, with PIXIE.
