Can I use PIXIE switches and dimmers without Bluetooth control?

Dimmers · https://pixiepartners.com.au/support-docs/can-i-use-pixie-switches-and-dimmers-without-bluetooth-control/

Yes, the PIXIE range of switches and dimmers will function as a normal device without Bluetooth connectivity.

So the PIXIE Dimmers will operate from the wall as a dimmer would. For example:

- Press once to turn on
- Press and hold to dim down
- Release, press and hold to dim up
- Press once to turn off

This is true for all PIXIE master devices including dimmers, switches and timers.

Likewise for PIXIE Multifunction Controllers (used for 2way control or scene switches) - these devices use Bluetooth mesh in the home - without needing an App or Internet - to communicate to the PIXIE Master devices which actually control the connected load (lights, fans, appliances etc.)

This way home owners always have the ability to control their lights and other PIXIE controlled devices directly from the wall - no matter the state of their mobile device's battery or internet status.
