Do PIXIE switches only work with SAL downlights?

Dimmers · https://pixiepartners.com.au/support-docs/do-pixie-switches-only-work-with-sal-downlights/

SAL PIXIE switch and dimming devices operate with most common lighting brands, subject to product compatibility and minimum load requirements.

This includes a wide range of LED down lights, filament LED lamps and legacy light sources such as tungsten and halogen down lights.

Some SAL products do have additional features which can be accessed from the PIXIE product range exclusively, such as the ability to change colour from warm white to cool light with simple button presses and / or from the PIXIE Apps too.

In addition to lighting, PIXIE smart switches, smart plugs, smart powerpoints, dual relay controllers and blind and signal controllers operate with fans, appliances, floor and table lamps, automated blinds, curtains, gates and garae door motors from a range of manufacturers.

If it can be switched, dimmed or controlled electrically, PIXIE can provide a solution to automate.
