Does PIXIE Work With Ventair Fans

Ceiling Fans · https://pixiepartners.com.au/support-docs/does-pixie-work-with-ventair-fans/

Yes, Ventair Skyfan DC range can be controlled with PIXIE using the FanLink module.

The FanLink module when combined with Ventair Skyfan DC range provide control with compatible mobile devices through the PIXIE App.

A great solution for sites with limited option for hardwiring switches or those adopting smart technology.

With a few taps of the app, users can:

- Select fan speed, or choose from Normal, Eco or Sleep Modes
- Schedule runtimes and routines
- Switch between Summer and Winter rotations
- Adjust lighting (Skyfan DC with LED light models only)

- Operate multiple FanLink devices at once.

Once a compatible fan has been selected the **FanLink FLINKPIX** module from Ventair shall be installed into the fan base controller prior to installation of the fan.

When using the **FanLink module** and where on wall control is also required to operate these fans, the contractor shall install and pair one or more of the specific PIXIE smart mechs – Multifunction Rotary Controller (SMFR/BTAS).

Once this device is wirelessly paired to the module, 5 speed control and for light enabled modules, step dimming and colour temperature selection is made possible using the dial.

Up to 8 SMFR/BTAS can be paired to any single fan control module. If two way fan control is required the contractor shall install up to 8 SMFR/BTAS modules.

These fan modules can also be controlled via the PIXIE app and PIXIE Touch Panels.
