Universal LED Strip Control

Dimmers · https://pixiepartners.com.au/support-docs/universal-led-strip-control/

PIXIE makes a universal LED strip controller.

What makes it universal is 2 things:

1. 1) You can use any constant voltage driver - DIM or NON DIM - from any manufacturer - recommend non dim to save money as the PIXIE controller does the dimming.
2. 2) You can use any* 12V or 24V constant voltage LED strip from any manufacturer of any configuration as per Single colour, RGB, RGBW, CCT, RGBCW.

On board dip switches allow the devices to be set for the correct control capabilities and PIXIE App GUI interact according to the type of LED attached.

The device has a load of 15Amp max allow longer, high power runs, and where multiple runs are needed, using the PIXIE app devices can be grouped so all controllers operate (dim / on / on / colour change) simultaneously.

More information on the controller can be found here:
