Will SAL PIXIE devices operate with a magnetic or leading edge load?

Dimmers · https://pixiepartners.com.au/support-docs/will-sal-pixie-devices-operate-with-a-magnetic-or-leading-edge-load/

Any PIXIE Dimmers **are not compatible** with leading-edge-only drivers or iron core / magnetic ballasts or drivers.

This applies to:

- - SDD300BTAM AND SDD300BTAM/BP
- - SDD350BT
- - SDD400SFI AND SDD400SFI/BP

PIXIE Switches can control some iron core or magnetic drivers and the data sheets for the products detail each individual switches capacity or different load types.

This applies to:

- - SWL600BTAM AND SWL600BTAM/BP
- - SWL350BT
- - STS350BT

Importantly, when using iron core or magnetic ballasts / drivers, the MAX load of the driver - for example a 100w iron core driver - is the load the switch will experience - irrespective of the connected lighting.

This is important for garden lighting. Before proceeding read the installation manual for each device and this article on garden lighting.
