

SMART CHARGING PROTECTION FOR AGED CARE

Safer Power for Mobility Devices

The PIXIE Smart Power Point now includes an automatic shut-off feature designed specifically for mobility scooter charging. By limiting charging time to 8 hours, it helps reduce the risk of lithium-ion battery overheating, supporting safer environments for residents, staff, and facilities.

Lithium Battery Charging Protection

Press either button 7 times quickly to activate the special mode. Once enabled, the socket turns on with a normal press and will automatically switch off after 8 hours. No app or programming required.

SIMPLE PROTECTION, BUILT IN

FEATURES

- ▶ **Automatic 8-hour shut-off**
Helps prevent overcharging and reduces fire risk
- ▶ **Designed for mobility scooter charging**
Ideal for aged care, retirement living, and residential garages
- ▶ **Smart control via PIXIE system**
Integrates with existing PIXIE smart environments
- ▶ **Improved safety for residents and staff**
Supports safer charging practices across shared spaces
- ▶ **Simple installation and integration**
Works within existing electrical setups

Protection Where It Matters Most

Lithium-ion battery incidents are an increasing concern in residential and care environments. Unattended or prolonged charging can increase the risk of overheating and fire. This feature provides a simple, automated safeguard to help reduce that risk.
